

# Hotwire Native

Aron Wolf

# Convert your fullstack Rails application into a mobile app

- ▶ It was created by 37signals (the company that invented Ruby on Rails!).
- ▶ It allows you to convert your application into a mobile app.

# Why?

- ▶ Maintaining multiple frontends is hard.
- ▶ This approach is more frequent than many think.

Native feeling: mixes native elements and web views

**Header: native**

**Body: web view**

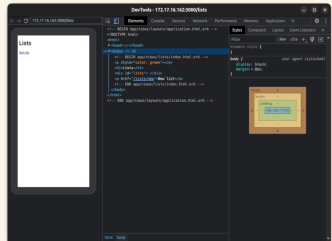

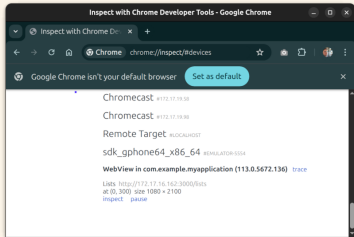

# Path Configuration

```
{
  "settings": {},
  "rules": [
    {
      "patterns": [
        ".*"
      ],
      "properties": {
        "context": "default",
        "uri": "hotwire://fragment/web",
        "pull_to_refresh_enabled": true
      }
    },
    {
      "patterns": [
        "/new$"
      ],
      "properties": {
        "context": "modal",
        "uri": "hotwire://fragment/web/modal/sheet",
        "pull_to_refresh_enabled": false
      }
    }
  ]
}
```

# Setup

<https://native.hotwired.dev/android/getting-started>

## Debug

Thank You!
